

REVIEW

for the educational and professional program
"Public Administration and Management"
on the specialty 281 "Public Administration and Management" of the first
(bachelor) level of higher education
prepared by the department of Public Administration and Law
Dmytro Motorny Tavria State Agrotechnological University

An urgent task of public importance is to provide the public administration system with highly qualified specialists of municipal, regional, national and international level, the formation of a new management generation with deep knowledge, able to think systematically and creatively, to make effective decisions, to be guided by the principles of humanity and to protect public interests. One of the ways it can be accomplished is through an education in public administration and management.

The purpose of the educational and professional program "Public Administration and Management" is to train public servants who are able to solve complex problems and problems in the public administration and management, provides for the research and implementation of innovations due to the uncertainty of conditions and requirements.

A special feature of the program is the close cooperation with the regional public administration and public organizations, allows mastering modern public administration technologies on real examples, in particular: internships in public authorities (regional councils, local governments, regional and local state administrations, state organizations, public organizations); public utilities state enterprises, organizations; research papers preparation, theses, articles; presenting the research results at scientific and practical conferences.

Educational and professional program "Public Administration and Management" on specialty 281 "Public Administration and Management" of the first (bachelor) level of higher education developed in the Dmytro Motorny Tavria State Agrotechnological University is relevant, meets modern needs, has the necessary structural components, meets modern requirements and can be recommended for practical use.
